Topic: Use of mouse wheel causes OMWin to freeze
Document ID: 440
Product: All
Revised: 3/11/2005
Author: Seth Krieger

Use of the center wheel on Microsoft Intellimouse and similar products may cause SOS applications to lock, requiring termination of the program from the task bar (right-click, then select **Close**). This issue appears to be specific to Microsoft's own mouse drivers. Wheel mice from other vendors, such as Logitech appear to be compatible, but only if you install the driver supplied with the mouse. Chances are that XP will recognize the new hardware and install a mostly compatible driver, but chances are you will have a problem within SOS applications.
